

WebConcepts Selected as Supply Chain Solutions Provider for ITC-Diligence.

ITC-Diligence, Inc., the largest independent operator of general-purpose Foreign-Trade Zones (FTZ) in Southern California, has selected WebConcepts as the solution provider for a new service offering to ITC clients. The agreement will allow ITC to extend its portfolio of high value-added client services into supply chain planning, inventory & demand management, replenishment and retail inventory management processes.

“Our choice of WebConcepts as solution provider was straightforward,” notes David Harlow, CEO of ITC. “WebConcepts’ iRIM application offers extremely advanced functionality for the full range of planning and inventory management activities, and is highly configurable. Our client base is so diverse it is absolutely essential that the application be readily configurable to each of our customer’s needs. We couldn’t realistically offer advanced supply chain management services without this flexibility.”

“We are extremely excited about this opportunity to assist ITC,” says WebConcepts’ Chairman Ray Young. “This is one of several arrangements we have established to leverage our solutions through value-added service providers, but ITC clients represent a tremendous opportunity for us to extend our client base into completely new consumer products categories.

About ITC-Diligence

ITC-Diligence, Inc. is an international trade consultant, national corporate Customs Broker and the largest independent General-Purpose Zone Operator of Foreign-Trade Zones in Southern California. ITC-Diligence, Inc. provides a unique blend of international trade related services to importers, exporters, manufacturers, distributors, and local government, focusing on Customs & Border Protection issues and a niche Foreign-Trade Zone business.
